

Duplicate Teams Fix & Button-Based Options Enhancement

Date

Saturday, November 8, 2025

Overview

This update addresses the duplicate teams issue and implements an intuitive button-based response system for the AI Coach Assistant, enhancing user experience by providing quick, selectable options for system data.

Issues Fixed

1. Duplicate Teams Bug

Problem: Teams were appearing multiple times in the Teams page and Dashboard when a user was both the owner and a member of the same team.

Root Cause: The teams page was combining ownedTeams and memberTeams arrays without deduplication logic.

Solution: Added Map-based deduplication logic in both:

- /app/dashboard/teams/page.tsx
 - /app/dashboard/page.tsx
-

New Features

2. Button-Based Options for AI Assistant

Feature: AI Coach Assistant now provides clickable buttons when asking users to select from predefined system data (teams, age groups, event types, etc.).

Benefits:

- Faster interaction - no typing required
 - Prevents typos and validation errors
 - More intuitive user experience
 - Consistent data selection
 - Mobile-friendly interface
-

Testing Results

Test 1: Duplicate Teams Verification

Result: Only 3 unique teams displayed

Status: PASSED

Test 2: Button-Based Team Selection

Result: Buttons displayed correctly and selection was automatically sent

Status: PASSED

Test 3: End-to-End Event Creation

Result: Event created successfully and appears in Schedule page

Status: PASSED

Files Modified

1. /app/dashboard/teams/page.tsx - Added team deduplication
 2. /app/dashboard/page.tsx - Added team deduplication
 3. /app/api/chat/route.ts - Added OPTIONS marker support
 4. /components/chat-agent.tsx - Implemented button rendering & selection
-

Checkpoint: "Fixed duplicate teams & added button options"

Status: Production Ready
